Class: CB-07
Group: 2
Location: Fontys R10
Tutor: Aleyna Kartal
Date: 08-03-2022
Tested group: 1

ID	UC	Expected result	Passed/Not passed	Tested result
1	FRDA-01	Successful login opening the menu for the correct department with all pages of their app.	Passed	Logging in was successful. A Logistics form popped up displaying a menu with 2 options: products and re-shelf. Optionally add a notification that pops up at the bottom left that notifies you if you logged in with success.
2	FRDA-01	A notification will show up informing that the credentials are wrong. After the alert is closed the login window will clear the input of the field password	Passed	A message popped up saying that either the username or password was incorrect. Password is cleared when you click ok on this message.
3	FRDA-02	A message pops up that the employee was created and asks if the logged-in user wants to add another employee. If he answers yes the fields will clear, if he answers no the window will close.	Passed	A message pops up that confirms the employee was created and asks if you want to add another user. fields are emptied when yes is clicked, the page is closed when no is clicked.
4	FRDA-02	A message pops up notifying that the required fields are empty and must be filled	Passed	A message pops up telling me I have to fill in all necessary information.
5	FRDA-08	The message will show up asking if you want to add a new shift. If yes window won't close, if no the window will close	Passed	A message pops up asking if I want to add another user. The window closed when no is clicked. The shift field is cleared when yes is clicked.
6	FRDA-09		Passed	Work shifts of the selected day and period are visible.
7	FRDA-10	The creating a product window closes, and the logistics window will refresh with the new product	Passed	The window is closed when you click on the create button. The creating window is closed automatically and you can instantly see the added item in the list of items. Seems good.
8	FRDA-10	An alert will appear notifying the user that a	Passed	When creating a product if the text fields were empty

		field is empty and won't create a product		the product was not created.
9	FRDA-11	A message will appear asking whether the user is sure he wants to delete the product. If the user press Yes the product will be removed and the data will be refreshed. If the user press No the message will close and the product won't be removed.	Passed	When removing a product a message appeared asking if the user was sure that he wants to remove a product. On confirmation, the product is removed and the data refreshes, on the decline the message is closed and the product won't be removed.
10	FRDA-12	The window will close and the data will automatically refresh.	Passed	The test is similar to the expected outcomes. Tip for clarity, when you update show a name or give it a label of what you are updating. For example, we had to update the price to 1700 but it was not sure what textbox was the price. When you delete the whole textbox it will show what it represents but when you update you will not see that because there is already something inside of it.
11	FRDA-12	A message will appear notifying the user that a field is empty and won't update the product	Passed	A message pops up with the message: 'Please fill in all necessary information. Maybe give a more detailed message with what is necessary. Or when something is not filled in change the textbox a bit red or a label popup with this is required.
12	FRDA-14	The data will be automatically filtered	Passed	Meets the expected results. What could be another option is when you change your combo box Brand to MSI it will automatically apply the filter without pressing the button
13	FRDA-19	A message will appear asking whether the employee is sure that he wants to log out. On yes window closes and the	Passed	It meets the expected result. Everything works properly. Option: Add an icon to the message box so it looks less empty.

		login window will appear. On no, the message is closed but the employee is not logged out.
